

Atlas Battery Tonic

PRODUCT DESCRIPTION

Atlas Battery Tonic is a specially formulated electrolyte additive designed to improve battery performance, extend service life, and prevent common battery problems. It rejuvenates lead-acid batteries by reducing sulfation on plates, minimizing corrosion, and enhancing electrolyte stability.

APPLICATIONS

Atlas Battery Tonic is recommended for use in all automotive and industrial applications requiring a high grade of water purity

- ✓ Automotive batteries (cars, trucks, buses).
- ✓ Inverter and UPS batteries.
- ✓ Industrial and stationary batteries.
- ✓ Solar and renewable energy storage batteries.
- ✓ Automotive Radiators (safe dilution of concentrated coolant).

The product can also be used in applications such as steam irons, humidifiers, and other cleaning applications where a high purity of water is required

FEATURES & BENEFITS

- ✓ Helps restore and maintain electrolyte balance in lead-acid batteries.
- ✓ Reduces internal resistance for improved charge acceptance.
- ✓ Extends the overall life span of the battery.
- ✓ Improves battery starting power and reliability.
- ✓ Help maintain consistent voltage output.
- ✓ Cost-effective solution for battery maintenance

TYPICAL CHARACTERISTICS

The physical and chemical properties shown in table are average value based on recent production, they are not limiting values. Minor variations which do not affect performance are to be expected in normal manufacture.

Properties	Units	Method	Values
Appearance	-	Visual	Colorless, Transparent
pH Value	-	-	7±0.25
TDS (Total Dissolved Solid)	ppm	-	0 -1

The typical characteristics mentioned represent mean values.

SAFETY, HEALTH & ENVIRONMENT

Atlas Battery Tonic unlikely to have any significant health or safety hazard when properly used in recommended application and follow good standards of personal hygiene.
